

Joe Gaebel

Software Developer

London, Ontario Canada

www.joegaebel.com joe.gaebel@hotmail.com (519) 697 7053

[joegaebel](#) [in joegaebel](#)

Full Stack Developer making maps in unknown territory.

SKILLS

Frontend

Advanced

backbone marionette angular
sencha ext coffeescript
javascript es6 sass & css

Backend

Advanced

ruby on rails node
elasticsearch

Database

intermediate

mysql postgresql mongodb

WORK EXPERIENCE

Captain (CEO) at Full Sail Solutions Inc.

September 2016 - Current

Using tried and true industry practices including Pair Programming, Test Driven Development, and rigorous code reviews, we provide quality software solutions.

Junior Engineer at Mavenlink

July 2015 - July 2016

www.mavenlink.com

At Mavenlink, I developed my skills as a Full Stack engineer, forming efficient database queries, writing and testing backend Ruby on Rails code, producing front-end features using Backbone & Marionette, and making them beautiful with Sassy CSS.

Software Developer at Sightline Innovation

September 2014 - March 2015

www.sightlineinnovation.com

At Sightline, we developed highly scalable web applications, utilizing open source development frameworks. This development utilized extensive use of JavaScript within Node.js, integration with Mongo and Postgres databases, as well as UI development with Sencha ExtJs.

EDUCATION

BESc. Software Engineering with Professional Internship

2012 - 2017

University of Western Ontario

PROJECTS

Social Microloan

In Development

A crowd-lending web-app used to create campaigns, receive funding, and handle automatic repayments with Stripe and Paypal. Developed using Ruby on Rails, implementing HTTPS.

San Francisco Journey

February 2015

Built www.DylAndJoeGoToSanFrancisco.com using Node and Angular.js, flew out to San Francisco for our University "reading week", knocked on Top tech corporation and small startup doors, blogged the whole experience. Scored a job at Mavenlink!

Hydro

October 2014

Developed a web-app to stream high definition movies from torrent network. Able to dynamically stream directly to web browser without third party software. Ability to seek and watch on demand by prioritizing torrent pieces. Beautiful, easy-to-use UI built with Node and Angular.js.

REFERENCES

“Joe and I worked very closely together, and he was critical to the success of our team. No one cares more about continuously improving themselves, or about doing whatever it takes to help a team succeed. Also, Joe proved extremely technically capable. He participated in several large-scale projects, and managed one implementing ElasticSearch. Thank you Joe, for being a great teammate!”

Andrew Huth - Team Lead, Mavenlink

“It’s rare that you come across standout talent like Joe. Joe is always the first and most willing developer to take on the hardest tasks during lengthy sprints. With great enthusiasm and character, Joe ventures through uncharted territory with little guidance proving consistent results. A valued member of our team as both a developer and teammate, I am confident in Joe’s technical capacity as much as I am with his leadership direction amongst the rest of the team to get the job done. My honest opinion is that every development team needs a Joe.”

Morgan Moskalyk - Team Lead, Sightline Innovation
